

Thank you for purchasing the Pentair IntelliConnect automated control system. Before you can begin to enjoy the benefits of IntelliConnect automation, there are a few simple steps you must take.

1) Ensure Your IntelliConnect is Receiving Adequate Wi-Fi Signal:

- The easiest way to ensure proper Wi-Fi connectivity is to take a cell phone or other connected device out to your IntelliConnect panel and check your Wi-Fi signal on your device.
- If Wi-Fi signal is inadequate, it may be necessary to purchase a Wi-Fi extender to service the area where your IntelliConnect is mounted.

2) Install the Link2O Application on Your Device:

- Use your device's App Store to download the Pentair Link2O app (the letter "O")
- Follow the app's setup instructions and enter all required data
- Hint: it is important that you set your device's Wi-Fi to the IntelliConnect signal before visiting the given IP Address during the setup
- If you are having trouble entering your home Wi-Fi password during setup, it is possible that your password contains characters that are not accepted by IntelliConnect software. If this is the case, please adjust your home Wi-Fi password to accommodate.

3) Set Up Your Link2O App for Your Personal Pool System:

- Once your App is set up, you will need to personalize it to your own filtration system.
- Your app should now show the Link2O Home Page
- Select the Green highlighted button which displays the name you have selected for your system.
- You will now need to tailor the app to your own personal system
- If you are connecting IntelliConnect to a new North Eastern Pools filtration system, here are some quick hints:
 - Set Relay #1 to "FILTER PUMP" and set for 240 volts
 - Set Relay #2 to:
 - If you have purchased an LED color changing light, select "PENTAIR COLOR LIGHT" 120 Volts
 - If you have purchased a white incandescent light, select "LIGHT (OTHER)" 120 Volts
- If you have a heater connected to your filtration system, and you do not see a heater on your home page, select "show disabled devices", select "HEATER", tap the button for "ENABLE PAGE"

** (If you have an existing system that has just been updated to IntelliConnect, or have chosen to have your system wired by an outside electrician, you will need to verify your settings with your technician/electrician)

4) Program Your Equipment Schedules and Settings:

-It is recommended that you set a "Schedule" for your filter pump which circulates your water for at least 14 hours a day.

-While in your "DEVICE DETAILS" page, tap the "FILTER PUMP" button.

-Tap the "MANAGE" button on the "FILTER PUMP" relay (usually relay#1)

-Select "TIMER / SCHEDULE"

-Set the desired on/off times

*Keep in mind that your heater will only operate while the pump is running, so it is suggested that the pump is set to run during hours of expected pool use.)

-Your Pool Light can be set to run on a "SCHEDULE" as well, but more commonly and conveniently, it can be set to an "EGG TIMER"

-Setting an "EGG TIMER" tells your light to turn off after a selected duration after it has been turned on.

-You HEATER can be set by selecting "HEATER" on the "DEVICE DETAIL" page

-Tapping the "OFF"/"ON" button will activate or deactivate your heater/heat pump

-When the heater is set to "ON", the desired temperature can be set by pressing the "+" and "-" buttons

If you are experiencing difficulty during setup, please follow these steps:

- 1) Select "HELP" on the Link2O App home page
- 2) If you cannot find an answer to your question in the "FAQ" and "USER GUIDELINES" pages, you can "REQUEST SUPPORT" through this menu
- 3) If you have not received timely support, or have an immediate concern, please call Pentair Tech Support at 1 800 831 7133
- 4) As always, if you are still having trouble, feel free to contact North Eastern Pools for assistance.

Thank you again for your purchase, and we hope you enjoy your IntelliConnect automated control system. We appreciate your business and look forward to servicing you in the future!
